

NIKAT – Product Overview

NIKAT is a hyperlocal platform connecting users with nearby shops and services with a simple, fast, and secure system.

Core Goal

Simple UI, fast performance, illiterate-friendly design, secure onboarding, fraud prevention using Aadhaar verification.

App / Web Flow

App Open → Language → Role → OTP Login → Registration → Home → Category → Shop → Contact / Unlock → Subscription → Order.

Authentication

Phone OTP login using Firebase Auth with session persistence.

User Registration

Name and City stored in Firestore.

Provider Registration

Step 1: Basic details. Step 2: Aadhaar verification. Step 3: Payment. If verified and paid, shop becomes live instantly.

Aadhaar Verification

Use third-party KYC APIs. Store only encrypted reference, not raw Aadhaar number.

Home Screen

Search bar, category grid, nearby shops.

Shop Listing

Shop name, rating, distance, premium badge.

Shop Detail

Call, WhatsApp, directions with lock system for unsubscribed users.

Lock System

If not subscribed, hide phone and disable actions. Unlock via subscription.

Subscription System

Plans from ₦49 to ₦399 with payment verification.

Order System

Users can place orders and track status in real time.

Provider Dashboard

View orders, earnings, and manage shop.

Backend

Firebase Auth, Firestore, Cloud Functions, FCM.

Database

Collections: users, providers, kyc, payments, subscriptions, orders, reviews, notifications.

Security

No raw Aadhaar stored. Phone access only via backend. Role-based access control.

Frontend

Flutter for app, responsive web using Next.js or HTML/CSS. Black + neon green UI.

Performance

Lazy loading, caching, optimized images.

Final Goal

Secure, scalable, fast, and trusted hyperlocal platform.
